Over the years, tons of tuning companies have gotten their hands on a Porsche 911 at some point or another. Typically, with every new generation 911, there’s hundreds or thousands of kits to improve upon the standard model. Very rarely, however, do we come across a tuning kit for a much older model such as this 1973 Porsche 911. German tuner, dp Motorsport, has decided to take on this task with an impressive body kit, interior updates, and a boost of power to 310 HP. The new body kit used for the 1973 Porsche 911 is made entirely from carbon fiber and includes a new front bumper, hood, fenders, lightweight doors, rear fender flares, rear bumper, and rear spoiler. Both hoods were also equipped with quick release fasteners. The Porsche’s standard windows have been replaced by a set of green-toned Plexiglas windows and lightweight lamp lenses were also installed, both for the sake of saving some weight. This is also the reason the carbon roof panel has been manufactured using the sandwich vacuum technique.[...]
