Porsche 997 GT2 by Oakley Design

25/01/2009 14:18 by admin

A comprehensive understanding of the relationship between the parts and components of a vehicle is necessary in producing a successful tuning package. For instance, the engine requires a compatible exhaust system design in order to accommodate modifications therein. The engine itself is linked with the transmission and also to a lesser degree with the suspension, braking, and others.All of these have been a major consideration in the Oakley Design giving you confidence that each package is carefully tested and developed over extended lengths of roads and tracks to provide customers high levels of satisfaction and driving pleasure. The Porsche 997 GT2 is such a design and comes with all the accumulated experience and expertise found in Oakley Design 997 GT3 & RS program.
