

BMW 5-Series by Prior Design

29/12/2011 23:30 by admin

German tuning firm, Prior Design, has become quite the specialist in outfitting high-end vehicles with impressive aerodynamic kits. Apparently, they've become so good at it that they're releasing these programs one at a time at an increasingly frequent rate. Prior Design's latest project involves the new BMW 5-Series F10 sedan and true to form, they've done yet another remarkable job. As a whole, the program includes plenty of new carbon fiber additions, particularly the new front apron, which by the way comes with LED daytime running lights. There's also a new integrated carbon fiber spoiler, sill extensions, a carbon fiber rear window spoiler, and a specially built diffuser insert that frames the 5er's stainless steel quad tailpipes. To top it all off, the BMW's hood comes with a print design that we can only describe as a little bit "leopard-ish." We certainly don't know how it fits into the whole program and the 5-Series's stature as a luxury car, but if Prior Design wants to include it with their program, we certainly won't question their credibility in that regard.[...]
