

Lamborghini Murcielago LP670-4 SV Twin Turbo

27/01/2012 03:41 by admin

A magnificent blast from the past gets a twin turbo setup and there's no way we weren't going to spread it around like wild fire. Robert Himler, creator of the titillating videos of his Underground Racing-tuned Lamborghini Gallardo, has moved on to a bigger and better project: the Lamborghini 670-4 SV Twin Turbo. The project is currently under development, but it is supposed to be ready by March 2012 and aims to be "the world's fastest and best Lamborghini." The biggest change for the special Murcielago will be its new RWD system, and not the AWD on the standard LP 670-4 SV. Himler opted to remove the front differentials, half-shafts, and torque tube - all of which allowed for a 125lbs reduction of the car's weight. The secondary cats and muffler were also removed and the weight was then reduced by 89 lbs. The next part of the transformation was the addition of a pair of turbochargers resulting in an output of more than 1000 RWHP, blasting the standard 670 HP out of the water.[...]
