

## Nissan GT-R "The Hulk" by Severn Valley Motorsport

23/03/2012 20:42 by admin

Just when we thought we found our favorite customized GT-R in AMS Performance's monster of a Nissan GT-R called the "Alpha Omega". Capable of blasting along a quarter mile in just 8.97 seconds with a ridiculous top speed of 216.9 mph, the Alpha Omega vaulted to the top of the list as far as most awesome GT-R's are concerned. Well, now we have to reconsider because UK tuner Severn Valley Motorsport has released their own souped up GT-R, affectionately billed as "The Hulk." One monster GT-R deserves another monster GT-R. The Hulk, which has been painted in a metallic Imperial Green Pearlescent finish, also comes with plenty of aerodynamic carbon components, including the new front bumper, the GTC Carbon bonnet, carbon gas bonnet lifts, and a host of carbon items - the rear diffusers, side skirts, and rear arch extensions - from Wald International. The S2 Active split wing from Aeromotion was also fitted into the Hulk, as are carbon race mirrors mounted on pillars, carbon exhaust surround, front and rear side markers, LSD doors, L.E.D angle eye day light running lights, and a new set of 20" Volks Racing light weight wheels wrapped in Toyo R888 315/30/20 tires. Inside, the Hulk was treated to a full carbon interior package, Cobra front carbon ultra light race seats, Alcantara fabrics, a six-point roll cage that was custom built to SVM specs, and Takata four-point race harnesses.[...]
