

Porsche Cayenne Chopster by Mansory

09/09/2009 21:33 by admin

As you know Mansory has bought the Porsche tuning arm of the Swiss company Rinspeed some months ago. Since then, the combination of Mansory's elegance and Rinspeed's lunacy has created some amazing machines! This is the new Chopster based on Porsche Cayenne, and it features a full carbon fiber re-styled body, has been dropped by 45 mm and is powered by a modified V8 developing 710 hp with top speed of 302 kph! Oh My!

Mansory relies on most modern manufacturing methods and solely uses the ultra-light and high-strength material carbon for its extensive auto body modifications. Whether front- or rear apron, doors, bonnet or the wings which broaden the cars by 80 millimeters – all components are formed out of carbon and hardened under strong pressure and high temperatures in the autoclave. The advantages of the high-tech method are evident: reducing the car weight does not only improve the acceleration values, but also reduces the braking distance and the fuel consumption of the Chopster.

The fully forged 11×23 inch mono block rims in turbine design and the Dunlop Sport Maxx GT-tyres sized 315/25/23 perfectly fit under the broadened Chopster wing. By the Mansory sport module for air suspension control, the XXL-wheels are additionally enhanced. If desired, the SUV's centre of gravity can be lowered by 45 millimetres.

The interior is lined with most delicate materials rendering a comfortable feeling. The leather of the Chopster interior is extremely hard wearing, but yet enormously soft and finished by expert hand. For the Chopster interior, the MANSORY interior designers only use flawless leather skins and accentuate them with discreet decorative stitches.
