

## Mercedes GLK 280 by Lorinser

16/09/2009 16:20 by admin

Sportservice Lorinser consciously chose the fiery opal colour for the paintwork of its latest GLK with the 280 V6 petrol engine. With its pervasive radiance the eponymous gem is one of the most coveted and exclusive opals in the world - and it is the only one with which you can uncover the full shine with a facet cut. As a result the traditional tuner from Winnenden has worked on all the corners and edges, in order to create an exclusive piece of work with incomparable brilliance out of the SUV. As a special optical highlight, the Lorinser front spoiler reflects the radiator grille of the GLK on the horizontal axis and thereby provides an expressive front design. The dark recessed insert is flanked on the left and right by the fog lights.

While precious stones lose volume through polishing, the GLK actually gains substance due to the work of Lorinser. The ribbed side sills in particular provide the 170kW / 231 HP strong SUV with more volume, and thanks to the Lorinser lowering set it hugs the tarmac in a bold sporty manner. The rear view of the four-wheeler is presented as a perfect piece of jewellery and appears to be made of incomparable fire. The Lorinser rear apron with the pronounced indentations definitely flirts with a degree of martiality - an impression which the dark insert with the sports grille and implied underdrive guard further intensify. On its flanks it sports a pair of sonorous double-pipes of the Lorinser stainless steel exhaust unit. In connection with the smooth six-cylinder engine under the bonnet the compact SUV thereby also proves to be an acoustic jewel. Real high-carats are, of course, not missing in the wheel arches: with their special varnish - matt black combined with a polished rim flange - the huge 9 x 22 inch Lorinser RS 9 light-alloy wheels provide real highlights. They are enclosed by the 265 millimetre wide Yokohama tyres. The contrast with the red outer colour of the vehicle is increased by the dark recessed wheel arches. With it the designers have succeeded in creating a real piece of jewellery, which constantly attracts attention to its owner.
