

Lamborghini Gallardo LP 560-4 by IMSA

28/10/2009 22:07 by admin

Germany-based tuners IMSA GmbH have released their package of upgrades for the Lamborghini Gallardo LP 560-4 following an initial preview back in February. The IMSA GTV kit was created from scratch, and comes with several carbon-fiber body panels.

A height-adjustable sports chassis was also used, with the mods capped by the polished stainless steel exhaust pipes. The new exhaust led to a 5% power increase to 590PS and up to 560 Nm of torque, nearly a 4% increase.

Included in the modifications are front and rear aprons, front and rear fender flares, side skirts, and a new rear wing. The company decided to use the same central-locking wheels found on vehicles in the IMSA Challenge. Lightweight 9Jx20 with 245/30 ZR20 tires, and 12.5Jx20 with 325/25ZR20 dimension tires are found in the front and back.

Carbon fiber bucket seats were also thrown into the package, as well as other composite interior parts. Leather and Alcantara rounds out the order.
