

Lamborghini Gallardo by Heffner Performance

14/01/2010 15:20 by admin

American tuner Heffner Performance released another product, this time based on the Lamborghini Gallardo. They call it the 560-TT. TT stands for the twin turbochargers they have put on the car's V10 engine. So the dyno test says 850 hp on normal fuel and a 1000 hp with 100 octane gasoline. The torque power is also around 1000 Nm.

The sprint time from standstill to 100km/h is done in only 2.8 seconds!

Apart from the strange blue paintjob, the exterior remains mostly standard. Only rear spoiler made from carbon fiber is added to make more downforce and push the back of the car down at high .

Unfortunately Heffner has not released pricing for this package yet.
