

Honda CR-Z Hybrid Sport Hatch by Noblesse

03/01/2011 18:17 by ??????

Ever since the Honda CR-Z hit the market, it's been the subject of numerous tuning projects, be it aerodynamic, performance, or a combination of both. The strong appeal of Honda's hybrid sports hatch is a testament to the car's appeal and easy-to-upgrade nature, where only a few other cars can attest. This time around, the CR-Z was given a ground aerodynamic package courtesy of Japanese tuning firm, Noblesse.

Among the notable additions to the CR-Z include front and rear bumper aprons, side skirts, a new rear diffuser, a large roof wing, a lightweight carbon fiber hood, underbody aero parts, a sport exhaust system, and a new set of alloy wheels. All the changes have turned the CR-Z into a meaner and more aggressive looking hybrid sports hatch, a testament to the ease with which a tuning firm can upgrade the hybrid sports car from a standard-looking hatchback to a car that is sure to catch tons of attention out on the streets.
