

Novitec Rosso Race 606 Carbon Ferrari California

15/02/2011 05:58 by admin

Novitec Rosso has been around the block with the Ferrari California a few times, but this latest tuning kit from the German firm is that much more impressive than the last package they put together. Well, technically, it's the same package with more and more being added with every new decision made. The new package is called the Race 606 and gets the same engine conversion, but many new carbon fiber body parts. For the engine conversion, the tuner is offering a compressor system that consists of a mechanical supercharger driven by the crankshaft via a cogged V-belt, a flap-controlled NOVITEC ROSSO high-performance exhaust system with sport catalysts, and newly calibrated engine electronics. The result is an increase from the standard 460 HP to an impressive 606 HP and a sprint from 0 to 60 mph made in 3.8 seconds. The Ferrari also won't stop until it hits 202mph.[...]
