

BMW 6-Series Coupe by Prior Design

22/03/2011 18:32 by admin

Barely a week has passed since BMW first pulled the covers off of the 2012 6-Series Coupe and we already have the first tuning company that's prepared a new aerodynamic package for the car. Say what you want about German tuning firm Prior Design, but they certainly are capable of burning the midnight oil to prepare a program for the 6er faster than you can say 'BMW'. Judging by the images lined up in a collage fashion, Prior Design looks to have given the 6-Series Coupe a number of new changes, including a redesigned front bumper fascia that's adorned with LED driving lights inside the air intakes. There's also a lower lip spoiler that looks to have been made out of carbon fiber and a new bonnet that boasts of air vents on both sides. The fenders on the sides also appear to have been redesigned with new side grilles and side skirts while the rear bumper fascia has also been modified to go with new carbon fiber exhaust tips and a small diffuser. Rounding out the aerodynamic modifications on the 6-Series Coupe is a set of matte black-finished wheels that we're estimating to be about 18" to 20".[...]
