

Next Generation 2013 Dodge Viper Undergoing Testing in the Snow

15/04/2011 19:29 by admin

Although roughly a year away from launch, Chrysler has published the very first official photo of a development mule of the next generation Dodge Viper undergoing testing in the snow. The prototype mule is based on the now obsolete 2010 Viper that was discontinued in the summer of 2010. Not surprisingly, the Auburn Hills-based automaker released very few details on its upcoming high-performance sports car as the only piece of information we get is that SRT engineers expanded the development scope for the next generation Dodge Viper to include stability control tuning for the first time. [...]
