

## Chevrolet LS7 Camaro L28 by Lingenfelter

20/04/2011 04:52 by admin

>Lingenfelter Performance Engineering has never been shy when it comes to their packages for the Chevrolet Camaro. For these guys, it's all about meat and muscle, and they'll go through great lengths to pack whatever ounce of it they can put on the Chevy muscle car. Their latest project, one that comes with 800 horsepower, was proudly displayed at the 2011 Camaro5Fest in Chandler, California. Judging by what they've put on it, this Camaro is one hell of a doozy. Lingenfelter wanted to give the Camaro some mean power to with its bulging muscles. Thanks to a 7.0-liter V8 engine with twin GT30R turbochargers, the Camaro's output was bumped all the way up to 800 horsepower with an 8.8:1 compression ratio. Aesthetically speaking, the Camaro will come with a new front-fascia splitter, rocker extensions, a new bonnet with its own air inlet, a rear deck lip and spoiler, a new rear fascia extension, Lingenfelter badging, and a set of 20" Nitto tires on the front and back. Inside, the car gets a new custom steering wheel with a fancy rear view mirror with its own video display. There are also CNC-machined pedal covers to go with an embroidered interior.[...]
