

Nissan GT-R Alpha 12 by AMS Performance

19/07/2011 23:15 by admin

One of Japan's greatest sports cars, the Nissan GT-R, has been the subject of countless aftermarket programs. That being said, it shouldn't be surprising that one more company is preparing arguably the most powerful GT-R project we've seen in recent time. AMS Performance is no stranger to working with Godzilla, having most recently produced the insane Alpha 10 program that netted the GT-R with 1,100 horsepower. This time, the company's upping the ante once again with the new Alpha 12 program that takes the GT-R's output from 1,100 ponies all the way up 1,318 horsepower and 1,014 lb/ft of torque. Horses gone wild! To make the car produce that much juice, AMS Performance took the GT-R's 3.8-liter, twin-turbo engine and modified the system while also increasing its boost pressure. On top of that, AMS also went out and reinforced the block to ensure that the car's engine could handle all the horses galloping underneath the hood.[...]
