

Porsche Cayenne by TechArt

29/08/2011 16:51 by admin

TechArt has been one of the foremost tuning companies of Porsche vehicles, having produced a long list of programs for the Stuttgart-based company. Their next program for the Porsche Cayenne will introduce a new set of aerodynamic kits for the SUV, called the TECHART Aerodynamic Kit I, as well as a performance program courtesy of the company's new TA 058/T1 performance kit. Among the parts included in the aero kit are a three-piece front spoiler with integrated air ducts, custom side skirts, a roof spoiler, and a modified rear apron. In addition, interested customers will also receive redesigned taillights, stainless steel dual tail pipes with a special embossed lettering, and last, but not least, a new set of custom alloy wheels that are available from 20" to 23." TechArt will also be offering their new TA 058/T1 performance kit for a number of variants of the Cayenne, specifically the Diesel and Turbo versions. The former, which carries a 3.0-liter V6 diesel engine with an output of 240 horsepower and 405 lb/ft of torque, will see an increase of 40-horsepower and 51.6 lb/ft of torque, hitting 280 ponies and 457 lb/ft of torque. This allows the SUV to hit 0-62 mph in 7.2 seconds.[...]
