Over the years, we saw lots of cars created by small companies, but the Zenro ST1 is clearly the most amazing of what we seen recently. Created by the Danish company Zenro Automotive, the Zenro ST1, is a rear wheel drive rocket-car powered by a turbocharged and supercharged 7.0 liter V8 beast, which delivers enormous 1,104 hp. The manual gearbox has to offer 6 speed, as it sprints from 0 to 100 km/h in 3.0 seconds, being limited to the speed of 375 km/h. Quite a supercar… wow!

The looks are amazing attractive as can be seen above, with polished stainless steel exhaust outlets, carbon-fiber body panel which help the monster lose some weight, light tinted glass, forged aluminium wheels and metallic paint.

According to Zenro, the ST1 has been in development since 2004 and they hope the first customers will get their cars next year. Though no mention on the pricing, one thing's for sure, those will be some really lucky customers.
