

Brabus High Performance 4WD Full Electric Concept Car

14/09/2011 22:41 by admin

Noted Mercedes tuner, Brabus, may be famous for all their high-powered tuning programs, but their penchant for power doesn't necessarily mean they don't have eco-friendly bones in their bodies. Somewhat surprisingly, Brabus is tapping into their inner affinity towards the environment with the introduction of the new BRABUS Technology Project HYBRID. The vehicle hybrid program is based on the Mercedes E 220 CDI, but instead of its usual powertrain, this particular car has been fitted with four electric motors. There's one motor on each wheel and each carries 50 kW (67 horsepower) apiece in Eco mode and up to 80 kW (107 horsepower) each in Sport Mode. The four electric motors are then joined by a 56 kWh lithium-ion battery that further increases the car's total output to 320 kW (435 horsepower) and - prepare yourself - 2,360 lb/ft of torque. Whoa.[...]
