

Ford Mustang Boss 302 Laguna Seca 3D Project by CoolFords

26/10/2011 16:40 by admin

What if we had the money to customize our very own Ford Mustang? That question has lead to countless hours of daydreaming about the perfect combination of tricks and accessories, with no real hope of getting the resources to actually do it. But while we were dreaming, some guys over at CoolFords.com ended up designing their dream vehicle into this cool 3D model that will be displayed next week at the SEMA Show. The goal is to get someone excited enough about their project to dish out the cash needed for the conversion. Their project is based on the most impressive Mustang: the Mustang Boss 302 Laguna Seca and has been developed in RPM-3D, a leader in 3D Motorsports Graphics. "The BOSS 302 is a well known brand so we did not want to "Re-Invent" the car or the base scheme, but we wanted to provide a custom look specifically for CoolFords.com. We also took into account that some day CoolFords.com may build this actual car, so we designed it in a way that would allow that to easily take place without too much extra expense or work on their end."
