

Lexus CT 200h by Five Axis

26/10/2011 17:40 by admin

The Lexus CT 200h was developed as a means to get greater fuel efficiency without too much thought put into the sportiness of the vehicle. That's the typical thought process involved in producing a hybrid, but Five Axis has a different way of thinking. They have developed a new tuning package for the hybrid hatchback just in time for one of the greatest tuning events in the world: the 2011 SEMA Auto Show. Their package shows that even hybrids can look great combining an aggressive exterior look with a sporty interior and that same tremendous fuel economy of the CT 200h. The look begins with a custom widebody conversion and a mysterious JDSU "Dark Passage" paint combined with custom black accents. The interior gets a touch more spunk with bright orange accents, uniquely appointed seats with laser etched Ultrasuede EcoDesign inserts, custom illuminated headliner with Ultrasuede EcoDesign Upholstery, and upholstery by Turinmodel, Inc., and 3M Crystalline window film by The Tint Factory. The technological factor was also boosted with a custom Touchscreen Interface center console. A set of 19" forged wheels complete the vehicle's overall look, while a new Stop Tech high performance big brake kit and a TEIN Flex Coilover suspension system provide a better stability.[...]
