

Chevrolet Corvette C6 by Late Model Racecraft

01/11/2011 00:46 by admin

Weren't we just talking about all those 1,000-horsepower American sports cars a few days ago? In case you need more proof of that, here's another mind-bending example: A Chevrolet Corvette C6 that was worked on by Late Model Racecraft to push out 1,600 horsepower. Built in collaboration with LMS and D2Forged Wheels, this berserker of a sports car could very well be one of the most powerful Corvettes you'll find anywhere in the world. This Corvette already has an impressive 6.2-liter V8 engine under its hood, one that produces 430 horsepower and 424 lb/ft of torque. Apparently for some people, those figures are just not worthy of their time. So they did what any right-minded tuning shop would do: tune it up to their standards. The result is a Corvette C6 that carries a twin-turbocharged WarHawk motor, resulting in a dizzying output of 1,600 horsepower. We'll repeat that in case you got confused: *1,600 horsepower*. And if that wasn't extreme enough, Late Model Racecraft made sure to give the Corvette the look to match its output, courtesy of a Z06 widebody kit and a new set of 19" (front) and 18" (rear) three-piece D2Forged VS1 wheels.[...]
