

Porsche 911 GT3 by REIL Performance

11/11/2011 23:08 by admin

The Porsche 911 GT3 certainly has a following with customers wanting a pure sports car experience, but sometimes there's a need for a little more. That's when tuning companies step in to customize the vehicles that every enthusiast seems to have. REIL Performance has done just this with the GT3 by adding a few extra horses and some well-appointed graphics. In its standard version, the 911 GT3 uses a 3.8-liter six-cylinder naturally-aspirated engine that develops maximum output of 435 HP. REIL Performance bumped the power with a specially designed Akrapovic exhaust system, which includes an almost indispensable damper control system that helps it adapt to the track. This system adds an extra 20 HP to the engine's output, bringing it up to a total of 455 HP. The tuner also added an HLS lift kit to bring up the nose of the sports car just enough to avoid getting scraped and ground against those road obstacles.[...]
