

## Porsche 911 Individualization Package by TechArt

15/12/2011 01:05 by admin

Known Porsche tuning extraordinaire, TechArt, has prepared a tuning package for the new generation Porsche 911 that accentuates the vehicle's individualization potential. Their individualization package includes changes for both the exterior and interior, but the future engine modifications are what will tickle everyone's fancy once they are revealed at the 2012 Geneva Motor Show. For now, the exterior package includes a full carbon fiber body kit and a new set of 20- or 21-inch five-spoke TechArt Formula light alloy wheels. The wheels are combined with large spaces between the spokes that revitalize the look of the car, show off the body color matching calipers, and offer effective heat dispersal. These wheels also create a 15% weight loss for the 911, reducing the rotating and unsprung mass and increasing the driving dynamics. There is also a new set of polished stainless steel sport tailpipes with either a dual oval tube or a round tube. For the interior, the tuner is offering full leather trim with a decorative stitching in any custom color or in a sporty diamond design. There is also sport steering wheel variations with TECHART paddle shifters and plenty of carbon fiber insertions.[...]
