

Lamborghini Aventador LP700-4 by Prindiville Design

26/01/2012 03:30 by admin

When a super car like the Lamborghini Aventador gets launched onto the market, tuning companies are just foaming at the mouth to get an opportunity to transform into something even better. Not many have had the opportunity, but one more is joining that short list with the beginning of an extensive package. British tuner, Prindiville Design, have opted to change the appearance of the Aventador, but have mostly focused on reducing the super car's total weight. The tuner started the package by improving the car's aerodynamics with new front and rear bumpers, new front and rear bumper grilles, new side skirts, and mirror covers. All of these additions are made of carbon fiber, but, according to the tuner, they are about 65% lighter than the ones found in the standard model. However, opting to change them can get pretty expensive as the front and bumper alone will cost a customer £11,000 (about \$17,000 at the current exchange rates). The next step that was taken was to add a new set of alloy wheels in any desired color or design.[...]
