

Lamborghini Aventador by Mansory

07/03/2012 01:58 by admin

Mansory's first tuning package for the Geneva Motor Show was based on a 2012 McLaren MP4-12C and was something that could definitely allow us to appreciate the finesse of Mansory's skills. Their package for the Lamborghini Aventador, however, is a completely different story. The standard Aventador is an amazing supercar, but somehow the tuner has managed to ruin that amazing image by adding way too much carbon fiber and way too many redesigned body parts. First and foremost, the Lamborghini Aventador by Mansory has way too much carbon fiber for our liking, on both the outside of the car as well as the inside, but it also received a series of elements that don't really fit in with the super car's luscious exterior. Mansory put in over-sized inlet ducts on the front of the car, a new front apron, a new front lip, new front wings, and a newly designed bonnet.[...]
