

Porsche 911 TT Cabriolet VR-T by Vorsteiner

23/03/2012 01:35 by admin

The wonders that tuning programs can do to sports cars never cease to amaze us. This particular one, a current generation Porsche 911 Twin-Turbo Cabriolet, comes courtesy of Wheels Boutique and Vorsteiner. Taking the German sports car, Vorsteiner's dealership in Florida built a program that consists of the German tuning firm's V-RT program. Made mostly out of carbon fiber, Vorsteiner's V-RT program includes a new front bumper that enhances the body lines of the svelte-looking 911. The front bumper comes with larger carbon air intakes for the radiators while ridding the car of the factory fog lights and the headlight washer bezels. Moving to the rear, the 911 Cabriolet was also fitted with a new rear bumper that has been designed to provide the sports car with a wider stance. Enlarged side intercooler extraction vents are also part of the program, while a new molded carbon fiber rear diffuser with integrated twin aero fins rounds and a heavily modified rear deck lid and wing round out the aero modifications on the German sports car.[...]
