

## Ferrari 599 GTO by Romeo Ferraris

30/03/2012 21:51 by admin

Italian tuning firm, Romeo Ferraris, is back for another installment of "tuning car awesomeness" and for their next program, they have reached for the mightiest of the mighty in the Ferrari 599 GTO. It certainly goes without saying that the 599 GTO is considered one of the finest vehicles to ever come out of Maranello and the boys over at Romeo Ferraris are quick to give the mighty Italian supercar even more juice than it already has. We all know that the 599 GTO comes with a V12 engine that churns out a staggering 670 horsepower at 8,250 rpm with a maximum torque of 457 lb/ft of torque at 6,500 rpm. Knowing all that, Romeo Ferraris still saw fit to give the 599 GTO a number of performance upgrades. For the stage 1 program, the Italian tuner added a new sports air filter and a new exhaust on the car, giving the 599 GTO an extra 15 ponies and 9 lb/ft of torque. On top of that, Romeo Ferraris also has a stage 2 program that includes a remapped ECU and a new exhaust system, further adding 40 more horsepower and 35 lb/ft of torque. All told, Romeo Ferraris's program for the 599 GTO results in the supercar now possessing 710 horsepower and 492 lb/ft of torque. Mighty meaty, indeed! [...]
