

## Dodge Challenger SRT-8 "Wrapped Challenger" by CCG Automotive

12/04/2012 00:51 by admin

Apparently, car wrapping is still a go-to accessory in Germany, so when CCG Automotive got their hands on a new Challenger SRT8, a lime green wrap was the way to go. Not only did they make the Challenger stand out in an electric green way, they also tinkered around underneath the hood so the muscle car could pump out 600 HP. The Dodge Challenger was separated from its usual 6.1 liter V8 engine and brought together with a new 7.0 liter Stroker HEMI-V8 engine that delivers a total 600 HP and an impressive 470 lb-ft of torque. As a result, the new SRT8 hits a top speed of more than 186 mph. The new engine was then combined with a new exhaust system with two square exhaust-pipe-ends, a new engine hood that allows the space needed for the new engine, and a KW coilover suspension with adjustable rebound damping to increase chassis performance. The CCG Challenger package also includes a new set of 22" black wheels with Pirelli Scorpion Zero Rollers, 265/35R22 on the steering axle and 295/30R22 on the drive axle. As previously mentioned, the Challenger was covered in a green and white wrap, accentuated with new LSD doors.[...]
