

Ferrari 599 GTX by SP Engineering and ADV.1 Wheels

25/06/2012 09:53 by admin

In their latest joint venture into the tuning world, ADV.1 wheels recently joined forces with SP Engineering to take a standard Ferrari 599 GTB and turn it into one of the most spectacular 599's we've ever seen, with the newly announced 599 GTX. Riding on incredible ADV15 Track Spec wheels which, as the name suggests, host an awesome 15-spoke design with matte bronze centers and an advanced three-piece construction. Created from forged aluminum, the ADV15 Track Spec wheels and the 599 GTX is set to replace the Novitec Ferrari F430 owned by ADV.1 Head Designer and President, Jordan Swerdloff. Rather than completely overhauling the Ferrari's standard, and already impressive 6.0-liter V-12 engine, SP Engineering have installed their GTX bodykit which features a carbon fiber front splitter, side skirts a small spoiler lip with a titanium exhaust system. Finishing off the set up are upgrades to both the suspension system and ECU unit.[...]
