

Vath Mercedes SLK 55 AMG

10/02/2009 16:45 by admin

The guys from Vath love to play and they took a stock Mercedes SLK and tried to improve the car's look and performances. The Vath Mercedes SLK 55 AMG is equipped with a 5.8L 8 cylinder engine which delivers 565 HP and a maximum torque of 770 Nm. With this great engine this ride could accelerate from 0 to 100 km/h in around 4 seconds and it's maximum speed is electronically limited to 300 km/h. The german tuners from Vath tried to improve the car's aerodynamics and they made a special body kit which includes a carbon fiber front spoiler lip and a rear diffuser that will prevent this car from taking off.

The Vath Mercedes SLK 55 AMG looks a lot more aggressive than the stock version of this car and it also comes with a stainless steel exhaust system, an adjustable suspension system and 19" alloy wheels that add an interesting contrast to this modified car. Vath also tried to modify the car's interior and this SLK 55 AMG has a carbon fiber trim package, a stainless steel roll bar and a sport steering wheel which will make any customer feel like a race driver.
