

Hamann Imperator Widebody based on Bentley Continental GT Speed

31/03/2009 16:31 by admin

Brace yourselves: it's another body kit for the Bentley Continental GT.

This one's from Hamann, and it's called the Imperator. As a follow-up to the performance upgrades designed for the Bentley Continental GT and GT Speed, the tuner's comprehensive appearance upgrade is now available. The sixteen-piece body kit includes a revised front bumper with the latest in LED daytime running light fashion, side skirts and fender flares with vents, and a new rear bumper, diffuser and spoiler. A choice of Hamann-designed wheels is available; 21 x 10.5 inch, or a set of even larger 22-inchers that are 10.5 inches wide at the front and 11 at the rear.

The visual upgrades are a nice complement to the power boost, which raises the power output of the 6.0 liter W12 to 630HP thanks to an ECU upgrade and a new exhaust with high-flow catalytic converters, an x-pipe and new mufflers. Torque is up to 553 lb-ft. The Continental GT Speed benefits as well, jumping to 650 horses and 612 lb-ft. A revised control unit for the Bentley's air suspension is part of the package as well, allowing the Imperator to be lowered 30mm up front and 20mm at the rear for a more race-ready look.

The interior is offered with clear-coated carbon fiber trim, of course, as well as aluminum pedals and a sport steering wheel.
