

VW Scirocco by APP

06/05/2009 16:25 by admin

If you're the type of person who prefers modifying their car with accessories and performance parts collected from various firms instead from one company, then APP Europe just might save you the trouble if you're into the VW Scirocco coupe. The German tuning boutique has put together a Scirocco 2.0TSI using parts from Rieger Tuning, KW Automotive, Wimmer Rennsporttechnik, CFC and MR Car Design.

The Scirocco's 2.0-liter turbocharged engine benefits from an upgraded ECU that costs €2,500 or US\$3,300, courtesy of Wimmer Rennsporttechnik, that boosts output from 200HP to 261HP and peak torque from 280Nm(206 lbs-ft) to 380Nm (280 lbs-ft) allowing the coupe to reach a top speed of 263km/h or 164mph.

Furthermore, the Scirocco gains a sport exhaust system from MR Car Design (€1,599 or US\$2,100) while the same company also provided a new limited slip differential (35%) for €2,990 or US\$3,950. These changes call for an update on the DSG's software that will cost you an another €890 or US\$1,180.

Braking power is provided by APP's high performance brake system (€3,220 or US\$4,260) with 4-pistons and two-part slotted discs sized 355x32 mm while KW Automotive is the company of choice for a set of coilovers (€1,529 or US\$2,020).

The new bodykit that includes a front apron (€599 or US\$792), side skirts (€328 or US\$433) and a rear apron with an integrated diffuser (€329 or US\$435) is from Rieger. The optic highlights such as the black roof and red pin stripes are from CFC (prices weren't announced).

Last but not least, APP Europe equips the Scirocco with a set of 19-inch, 3-piece bi-colour aluminium wheels (complete set for €5,200 or US\$6,870) wrapped in Vredestein Ultrac Sessanta high performance tires.
