

## Nissan GT-R by Ventross

17/05/2009 23:09 by admin

Ventross revealed today its latest customization kit for the Nissan GT-R, featuring the same high quality aerodynamics engineering and construction expected from parent company Vorsteiner. The tuner created a new replacement front fascia featuring enlarged carbon fiber air intakes for the radiators, additional side louver openings and a front lip spoiler. The rear includes a new air diffuser redesigned to replace the factory plastic version with a more aggressive dry carbon fiber piece. The entire kit is constructed from dry carbon fiber using Vorsteiner's proprietary dry carbon fiber vacuum technology which maximizes strength while significantly reducing overall weight. The carbon fiber aero components for the Nissan GT-R will hit the market on June 1st , 2009.
