

Audi Q7 by Avus Performance

19/05/2009 22:52 by admin

German tuning boutique Avus Performance has unleashed its latest offering based on the pre-facelift Audi Q7 fitted with the 4.2-liter V8 TDI diesel engine. To give the large SUV some extra oomph, Avus Performance updated the software of the V8 diesel's ECU thus boosting output from 326HP to 365HP and peak torque from 760Nm to 880Nm or 649-lbs/ft. According to the German firm, the result is a 0-62mph (100km/h) time in the 6.0 second range and a top speed of 245km/h or 152mph.

Furthermore, the Q7's air suspension has been upgraded with a new electronic lowering module that allows the SUV's ride height to be lowered by up to 90mm.

The package also includes 23-inch alloy wheels in silver, titanium and various other colors, LED daytime running lights, darker tail lamps, black front grille and optionally, a high-end audio-video system with additional monitors integrated at the back of the front headrests.
