

## Corvette ZX-1 with 620HP Supercharged V8 by Karvajal Designs

25/05/2009 23:04 by admin

Karvajal Designs has been displaying its Chevrolet Corvette-altering wares for some time, and it's finally giving up the details on its line of C6 exterior and engine modifications. The ZX-1 Stage One package includes a completely redesigned body kit that widens the 'Vette's haunches to 80-inches (with all the requisite ducting and panels), along with front and rear LEDs, custom exhaust, rear diffuser and 18-inch HRE aluminum wheels.

In addition to the other ZX-1 bling (aluminum sill plates, floor mats, flat-bottom steering wheel, alcantara swathed race seats, etc.), a performance package is available that includes Baer brakes, a Pfaft coil-over suspension, anti-roll bars, full under-body aero package and &ndash; most importantly &ndash; a Magnuson supercharger tuned to produce over 600 horsepower. If that isn't enough, all of the exterior bits can be had in carbon fiber and coated in a hue of your choosing.
