

Mansory Cyrus based on Aston Martin DBS or DB9

24/09/2009 16:00 by admin

Mansory presents the Cyrus package based on the Aston Martin DBS or the DB9. The Cyrus emphasises masculinity and power with its newly designed front skirt with enlarged air inlets, the carbon fibre wing extensions and the newly designed rear skirt with an integrated diffuser. The two slotted power domes on the carbon fibre bonnet send extra air into the 12 cylinder engine. Completing the picture are the stainless steel tailpipes attached to the sonorous sport exhaust system.

The car squats on large 9x20 front and 10.5x21 rear ultra-forged rims wrapped in 255/30ZR20 front and 295/25ZR21 rear Dunlop Sport Maxx tyres. The coilover suspension has been adjusted to lower the centre of gravity and improve road holding.

Mansory's definition of luxury extends to the interior where tailor-made carbon fibre parts are found. They include some bits from the dashboard, the centre console and the re-designed steering wheel. Foot pedals are made of aluminium while the door sills and head rests feature embroidered CYRUS logos. Hand-stitched leather covers the seats, parts of the dashboard and inside the door panels.
