

## Aston Martin DB9 Volante by Wheelsandmore

23/11/2009 10:00 by admin

German tuner Wheelsandmore has some ideas of its own for the Aston Martin DB9 convertible.

First up is a performance upgrade for the 6.0 liter V12 engine with 476 hp and 600 Nm (442 lb-ft) of torque that comes with the production version. Wheelsandmore boosts that by 60 hp while adding 68 Nm (50 lb-ft) of torque too. They've done so by tinkering with the ECU and adding a stainless-steel sport exhaust system with 200-cell sport catalysts and noise-volume valve control.

Suspension-lowering is part of the package with the DB9 sitting 25 mm lower.

The DB9 also gets a new body kit made of polyurethane along with side skirts, front and rear aprons and a rear lid spoiler. The convertible gets fitted with Kahn RS-V 20-inch wheels with Dunlop Sport Maxx performance tires - 255/35/20 for the front 9.0x20 rims and 285/30/20 for the 11.0x20 rear rims.

Prices are &euro;5,999 for the wheel set, &euro;9,000 for the body kit, &euro;8,800 for the exhaust system, &euro;3,400 for the ECU upgrade and &euro;1,150 for the lowering springs.
