

New Techart kit for Porsche 911 Carrera

23/11/2009 16:59 by admin

Hear and feel: 35 hp enhancement for 997 from model year 2009.

A new TECHART engine performance kit is now available for the 911 Carrera S and Carrera 4S models. The power kit TA097/S1 consists of a new ECU management as well as the valve-controlled exhaust system "Racing".

The exhaust system includes two stainless steel manifold units, sport catalysts, valve-controlled silencers as well as stainless steel double oval tailpipes, in chrome or black chrome.

The driver can choose between a close-to-series sporty sound or a powerful racing sound. In addition, the new power kit provides a perceptible power increase of 35 hp.

An individual sound experience is also available for the standard engines without TECHART engine performance kit. The TECHART exhaust system "Sport" consists of valve-controlled silencers as well as stainless steel double oval tailpipes, in chrome or black chrome.
