

Bentley Continental GT by Vorsteiner

30/11/2009 15:03 by admin

The BR9 edition based on the Bentley Continental GT/Speed Series consists of a 5-Piece lightweight aerodynamic package that is constructed with our high tech vacuum bagged dry carbon fiber technology.

Upfront our designers started with a full replacement front bumper cover that houses a larger and taller air inlet ducting in conjunction with a replaceable carbon fiber lower chin spoiler to optimize downforce & airflow.

The all-new BR9 front bumper sits 39mm lower than the original factory bumper and exudes its powerful & confident presence on the road.

Matching the new lower stance of the BR9 front bumper a full length side skirt attachment was created which utilizes a carbon fiber sill extension that improves aerodynamics & downforce at high speeds.

The BR9 carbon fiber rear bumper also sits 35mm lower than the original factory bumper accentuating its new aggressive sports car like stance. The BR9 lightweight rear bumper houses a racy integrated carbon fiber rear diffuser with built in dual racing fins that sits in between the oval tail pipes.

Finally the rear end of the BR9 is completed with an elegant yet functional carbon fiber deck lid spoiler attachment to balance the additional downforce of the front end.

All of the carbon fiber aero components are individually hand made by our master trained technicians and can be ordered in a choice of glossy or matte finish carbon fiber.

An optional 22inch Forged Aluminum Monoblock Mesh wheel code named the V-101 is also offered along with Michelin Pilot Sport PS2 Tires.

The wheels are an optional add-on to the BR9 aero package that can be custom painted or powder coated to the customers desired finish specifications.

Our designers & engineers worked hard in creating a complete package that would not take away from the beautiful lines of the factory body but rather focusing on methods to enhance it. We wanted to offer our Bentley customers something that was classy and sports coupe like and we feel we have accomplished this goal.

I'm not pretty sure if there is anything like [promotion code](#) for things like this but I will surely look around.
