

Porsche Cayman X-Wide by XTR Carchip

30/11/2009 23:07 by admin

German tuner XTR Carchip Tuning has unveiled this 2006 Porsche Cayman "987" S with a wide body kit and a couple of engine modifications. The body has a front spoiler with carbon splitter, side skirts, carbon fibre mirrors, rear side panels and detachable GRP fenders. The Pirelli tyres are wrapped around 3-piece 18-inch BBS RS wheels with central locking. The suspension was upgraded and a new Super Sprint "Magnum" exhaust system.

The interior features a new carbon fibre dashboard, 6-point seatbelts for the Recaro GT3 seats, a safety roll cage, air conditioning and the original factory audio system.

Power increased from 217kW (295hp) to 228kW (310hp) though some slight engine chip tuning. While this is quite a modest gain, XTR has given assurances that come spring 2010 a prescription that includes twin turbos will lead to a push of about 625kW (850hp).

Despite its looks, the Cayman is intended for the street with some hobby track racing on the side.
