

VW Golf VI GTi by RevoZport

19/01/2010 15:57 by admin

Hong Kong tuners RevoZport released aerokit for Golf VI GTI. The Golf VI GTi - RZR bodykit is produced by light weight composite material and Carbon Fiber Composite for the strength and integrity. RZR includes a full package of modifications without changing the car's overall appeal.

The bodykit includes a fully modified front bumper with built-in LED daylight and front splitter that is adjustable for different downforce settings. The bonnet is vented and weight only 4kg thanks to the use of 100% carbon kevlar material. Fender flares and new look rear bumper with adjustable diffuser along with the carbon side mirror caps and the carbon rear spoiler complete the styling kit for the RevoZport's Golf GTi RZR.

In addition to the body changes the company mapped the engine and added 70 hp to 270hp. Exhaust system was changed too.

The Golf VI GTi RZR tuning package is currently available for order, and will appear in shops from February.
