

Mercedes E-Class Coupe by Lorinser

23/01/2010 22:11 by admin

German tuners [Lorinser](#) known as one of the top addresses for the exclusive refinement of Mercedes automobiles have released details and images for the E-Class coupe. An entire tuning program renders the two-door car an even more dynamic and significantly more individual mark.

Sporty elegance is the motto of the Lorinser aerodynamics set. The new radiator grill with one slit form the front of the Lorinser E-Coupé and stylishly adjusted components of the front bumper with the integrated LED daytime running lights into center of attention. The roof and rear lip and the rear bumper add-on part with diffuser look harmonise congenially. The dynamic appearance is perfected by the new side skirts. The earthy and impressive sound stems from the Lorinser sports exhaust system. The stainless steel rear muffler with its edged dual tailpipes perfectly integrates into the newly designed rear section.

The package also includes set of LED daytime running lights, 20 inch alloy wheels, new adjustable suspension springs that lower the car by 30mm and aluminum pedals and leather-lined floor mats for the interior.
