[VÄTH Automobiltechnik](#) released their new tuning program for the Mercedes E63 AMG and they think that it is exactly the right choice for those who like adrenaline rush.

For the exterior: a carbon fiber front lip spoiler, badgeless grill, boot spoiler and a carbon fiber diffuser all for the price of &euro;4319. As a matter of tradition, VÄTH guarantees a high level of road safety. The road holding capacity has been improved by lowering the airmatics by about 30 mm. To finish the perfect outline there are three-part 20" alloy wheels with individually designed 245/30-20 or 285/25-20 high performance tyres.

Under the hood: enlarged the cylinder head channels, new engine management software, and added new pistons, sport cam shafts, valves, a larger intake, and bigger exhaust valves. Thanks to these modifications, the engine produces 87hp and 60Nm more or 605hp and. This allows the V63RS to take 0 to 100 km/h in 4.1 seconds, and to reach max speed of 340 km.

For the interior: carbon trim and velour floor mats with VÄTH logo.

Sports braking system with 390 mm brake discs and with 8 pistons fixed caliper for the front will stop this beauty safely.
