

Concept One by TechArt

09/03/2010 16:47 by admin

TechArt presented its Concept One design study at the 2010 Geneva Motor Show. It is based on the the Porsche Panamera.

The Concept One is looking just like a manufacturer concept car except the Lambo doors of course.

The exterior package is dressed in carrara white and includes, extravagantly designed bonnet with inwrought air outlets, new fenders and side skirts, trim strips and elegant trim frames in the windows, a rear apron with integrated air openings and matching diffuser, a height-adjustable rear spoiler and 22-inch TechArt Formula III forged light alloy wheels.

The Concept One has an extremely unique interior with funky materials and designs. It comes in a leather finish with a cocoa and white color combination, leather applications on trim parts in cerbero, as well as manually processed decorative stitching in phosphor green. There is also a 10.2-inch LCD screen in the rear, 3-spoke PDK sports steering wheel with shift paddles and a rear center console and two high-quality folding tables built into the front seats.
