

BMW X6 by Status Design

30/06/2010 17:02 by admin

Tuning company from Russia Status Design presented their own program for BMW X6. It includes both new body-kit (SD F16) and power increase.

The body-kit features a carbon fiber roof spoiler, front bumper with integrated LED daytime running lights, some carbon trim for the window surrounds and mirror covers, new rear bumper that accommodates a pair of dual tail pipes and a carbon fiber diffuser. The entire package is finished by 22" wheels from Hartge.

Under the hood, the Moscow based tuner installed a turbocharged 3.0-liter straight-six engine with revised ECU, a high-flow air filter. Thanks to these modifications and the new sport exhaust the engine produces 380hp - an increase of 80hp.
