

Ferrari California by Anderson Germany

24/09/2010 12:40 by admin

Düsseldorf based tuners from Anderson Germany has released a new performance and styling package for the Ferrari California.

The engine was boosted from the original 453hp 4.3-liter V8 up to 508hp. The increased performance is owed to software optimisation and a valve controlled stainless steel exhaust system, which can be set to three different sound modes with a remote control.

For the exterior Anderson Germany offers carbon fiber hood, front spoiler, side skirts, rear diffuser, and rear bumper and tinted taillights. Special light-weight wheels 21 and 22 inches in size have been installed wrapped with high-performance tyres of size 255/30-21 and 315/25-22. For a sporty street drive, adjustable dampers were installed which can lower the ride height 35mm and raise it up to 40mm.

The carbon interior package includes air vents, radio facing, centre consoles, door handles, rocker switches and steering wheel facing.

Anderson Germany offers a special pick-up and delivery service on request.
