

## VW Touareg by JE Design

07/10/2010 17:00 by admin

The tuners at Germany based JE Design have just released photos and details of the 2011 VW Touareg project, which involves a styling and performance upgrades.

To give the giant SUV an aggressive appearance, the tuner installed a widebody kit which includes a new front grille and spoiler, wheel arch extensions, a rear apron and a roof spoiler. Visual enhancements also include a new exhaust system with 90 mm dual tailpipes and a set of 22-inch custom alloy wheels equipped with 295mm rubber.

Set of 30 mm wheel spacers on the front axle and 40 mm wheel spacers on the back axle ensure that the wheel housing is optimally completed.

In addition, the tuners have also developed a pneumatic electronic suspension lowering module which reduces ride height by 35mm.

The 4.2-liter diesel engine that produces originally 335hp has been modified by revising the ECU. Thanks to this modification the engine now outputs 410hp and takes the 0 to 100km/h sprint in 5.4 seconds and reaches top speed of 269km/h.

Full treatment of the Volkswagen Touareg cost almost \$25,700 at JE Design
